

RENTOMOJO FULLSTACK ASSIGNMENT

Problem Statement:

1. Create a commenting system like Hacker News.
2. A user can reply to another user's comment and that will be a nested comment.
3. Build user registration and login capabilities using Github Auth.
4. Feel free to use any database of your choice

Expected Functionality:

1. Users should be able to create, reply and edit comments.
2. Users should not be allowed to modify another user's post/comment

Notes:

1. We expect a solution in javascript (or) typescript.
2. Please include a brief explanation of your design and assumptions, along with your code, as well as detailed instructions to run your application.
3. We assess a number of things including the design aspect of your solution and your object oriented programming skills. While these are small problems, we expect you to submit what you believe is production-quality code; code that you'd be able to run, maintain, and evolve.

Things we look for in your code

1. Clear and concise object modelling
2. Concise and logical separation of responsibilities - (emphasis on single responsibility)
3. Modular and readable code

Credentials:

1. Github: can use your personal
 - a. Client ID: 78e0d3578db374d987f7
 - b. Client Secret: b148631d3ae1c049969dace29edc08f34e3b88eb
